Ordering

You may place your order through our secure website at ShelvesThatSlide.com, by phone at 1-800-598-7390, by fax at 1-800-598-7390, or by mail with your payment.

Payment

We accept Visa, MasterCard, American Express, money order or personal check. If paying by check, your order will be delayed until the check clears your bank.

Shipping

Premium shelves usually ship within two to three weeks while standard and economy shelves usually ship within one week. Other available products ship within two to three days unless otherwise noted. Our online store at www.ShelvesThatSlide.com will provide you with the order's shipping cost upon entering your order and zip code. Free shipping applies to the contiguous United States on **custom shelf** orders of \$750 or more; wire shelves, accessories, trash systems, and lazy susans do not qualify.

Return Policy

In the event a return is necessary, you may call us at 1-800-598-7390 to obtain the required return authorization number. All items must be returned in its original packing in an unused and unaltered condition. If we have made a mistake in fabrication, we will replace or accept the item at no cost to you.

Recut Policy

See website or call for details.

Cancellation

If you cancel your order before it goes into production, you will not be charged a 25% cancellation fee.

Premium Shelves

Our most popular shelf! Premium shelves are constructed with lacquered 9-Ply Baltic Birch with a vinyl covered $\frac{1}{4}$ " bottom. This shelf has a 100 pound capacity and is made with rabbeted joints to provide extra strength. Available in different heights from 2 $\frac{3}{8}$ " to 9 $\frac{7}{8}$ " Tall.

New Line and Economy Shelves

Also constructed with Birch, these shelves are neither lacquered nor rabbet jointed. New Line shelves will hold up to 75 pounds. Economy shelves are made of $\frac{5}{8}$ " thick melamine with your choice of Maple or Oak hardwood fronts.

Slides

All shelves are shipped with the recommended Blum $\frac{3}{4}$ extension slides and meet the needs of most customers and cabinet types. Ball Bearing Soft-Close ("BBSOft") and Blum full extension slides are available at an additional cost. Both Blum slides include a lifetime warranty. The BBSOft slides reduce the capacity to 75 lbs., warranty to 5 years, and are only available on our Premium Shelves.

Cabinet Types & Measuring

Face Framed Cabinets

Face Framed cabinets have drawers and doors that close on top of the face frame; the face frame is generally seen between the cabinet drawers. These cabinets have a front frame/trim or "stile"; this frame covers the front edges of the sidewalls as well as top and bottom. Most of these double door cabinets have a center stile.

Frameless Cabinets

Frameless cabinets, also called Euro-style cabinets, have no front frame. The edges of the sidewalls and bottom can be seen from the front. If you have a frameless cabinet with one door, you will either need to remove the L brackets and mount the slide directly to the sidewall or reduce your Clear Opening Width by $\frac{1}{4}$ " to allow for the L brackets.

Measuring Pullout Width

The open gap that the shelf will actually move through. Any intrusions on where the shelf would move will make this measurement smaller. Measure at the height the shelf will be installed. Remember to reduce the measurement to account for things like door overlap, hinges, and doors that open less than 90 degrees

Measuring Pullout Depth

The space from the inside front wall to the inside back wall of your cabinet. Make sure to reduce your measurement to account for protrusions like pipes, wires, outlets, etc.

Mounting Styles & Slide Types

There are four methods of mounting. The easiest and most common method is the base mount. It is used for mounting our shelves to an existing full shelf or cabinet base; the slides will include four L brackets. If you have an upper shelf that is only 8" to 12" deep, you can use the half-shelf mount. The half-shelf mount includes L brackets on the rear of the shelf while the front of the slides are attached to the cabinet face frame or sides. If you do not have an existing shelf to mount to, you will need to use either the rear mount or side mount methods.

Base Mount

Used for mounting to an existing full shelf or cabinet base, base mounting is the easiest and most common method and works with both full and $\frac{3}{4}$ extension slides. For frameless cabinets with one door, you will need to deduct $\frac{1}{4}$ from the clear opening width to allow for the L bracket and screws.

Half-shelf Mount

Half-shelf mounts should be your choice if you have a shallow shelf in the rear of your cabinet and work best with $\frac{3}{4}$ extension slides. Make sure to measure the opening width at the height of the half-shelf.

Side Mount

With the side mount, the slides will attach to the cabinet sidewalls using spacers or wood build-up. If you are installing multiple shelves in a closet or pantry, using wood build-up is recommended.

Rear Mount

Plastic sockets are mounted to the end of the sliding hardware and are attached to the cabinet's back wall; the back wall must be thick enough to support the slides. The front of the slide is attached to the cabinet face frame as with the half-shelf installation.

Blum $\frac{3}{4}$ Extension Slides

Slides that can move the shelf $\frac{3}{4}$ of the way out of the cabinet (using little wheels). To give you an idea of the range: When the shelf is slid open, shelf contents that were in the back take the place of contents that were in the front. These are the recommended slide type. They have smooth movement and reliable rollers.

Ball Bearing Full-Extension Soft-Close

Slides that can move the shelf completely out of the cabinet. For smooth movement and a soft close, these slides use ball bearings rather than wheels. The mechanism is slightly more complicated than $\frac{3}{4}$ extension. Unlike the other full extension slides, rear mounting works great for these slides. Shelf warranty is reduced to 5 years with these slides.

Installation

These instructions are offered as a guide for installing pull-out shelves and are not intended to offer every detail for every possible installation. It is expected that the home improvement do-it-yourselfer has sufficient knowledge and aptitude to judge the soundness of the shelf installation.

For assistance with measuring and installation, please visit our website at ShelvesThatSlide.com —> Products —> Help & How-To Guides or Call us at 1-800-598-7390.

If you are installing your pull-out shelf on your cabinet base or a permanent full shelf within your pantry or closet, you may go straight to installing the slides. If the shelf is adjustable, we recommend replacing your plastic shelf clips with the metal clips (Page 14) that we have available for purchase.

Please keep in mind that the front mounting of the shelf will be subjected to twice the weight once you install the pull-out shelf. You might consider placing a few screws into the back or sidewall right above the existing shelf as an added precaution against tipping; just be sure that the walls are thick enough to keep the screw from going through the exposed wall.

Base Mount

For a full shelf or base installation, you will have two L brackets on each cabinet slide. The wheeled end of the slide to be installed in the cabinet is the front. Set the slides onto the existing shelf or cabinet base at the approximate width of the sliding shelf. It is most important to get the right side in place; you can slip the left side into place after getting the right side in properly. Insert the shelf into the cabinet and align the front end of the shelf for squareness and proper set-back. When you have the shelf adjusted, press down slightly, and slide the shelf forward just far enough to expose the rear brackets. Using the bracket hole that goes side-to-side, insert a screw, slide the shelf back into place and check the alignment; repeat on other side. If all is well, you can carefully slide the shelf without disturbing the position of the front brackets. Install screws in the front brackets in the same manner you did for the rear. After everything is aligned, remove the shelf, and install a screw in the bracket's center hole to lock it in place.

Half-Shelf Mount

For half-shelf installations, you will need a small level. Check the existing shelf to make sure it is secure and cannot lift up. The slides for your half-shelf installation will have one L bracket mounted toward the rear; the wheeled end is the front. Set the rear bracket on the existing shelf, place the front edge of the slide against the face frame about 3/16" from the front, and place your level on the slide to level it. Once level, mark the location of the front hole in the slide. Measure the height and make a corresponding mark on the other side. Drill a small pilot hole to prevent splitting. After the front of the slides have been attached, you can set the shelf in place by lifting the wheels on the rear of the shelf slides over the front wheels of the cabinet slides. Insert the shelf all the way into the cabinet and align the shelf to be square with the cabinet front. If there is too much space between the face frames, you will need to insert spacers, washers, or wood buildouts. Once the left slide is properly aligned, press down slightly on the shelf, and extend it far enough to see the rear bracket. Place a screw in one of the slotted holes and tighten moderately. When alignment is correct, repeat the process and insert a screw in the left bracket. Once everything is aligned, extend the shelf again and place a screw in each bracket center hole to lock it in place.

Installation Continued

Rear Mount

For rear mounting, you must specify a rear socket installation when ordering. Determine the height for the shelf and mark both cabinet face frames for the bottom of the shelf. Insert the cabinet slides partially into the plastic sockets. Attach the front end of the slides (wheeled end) to the marked cabinet face frame. You will need to push the slide slightly against the back wall of the cabinet to seat the socket to the needed depth. Install the shelf by lifting the rear end of the shelf slides over the wheels on the front of the cabinet slides, slide the shelf in completely, and align it to be square with the front of the cabinet. Mark a line on the back wall for the position of each slide for the horizontal placement. Remove the shelf and place a level on the cabinet slide. Align the slide with the previous line marked and level the height. Now you can either install one screw in the socket or mark another line for the vertical position. Repeat for the other side and reinstall the shelf and check for proper operation. Once you have the shelf adjusted, install at least one more screw in each socket. If the shelf does not slide smoothly, make sure the slides are parallel to each other and not twisted.

Side Mount

For side mounting, we recommend that you install vertical strips of wood on both sides of the cabinet sidewalls; one near the front and one near the back. The sidewalls are usually not more than 1/2" thick, and without the added support of wood buildouts, leverage will cause a weak installation and increased shelf stress. It is best to use a piece of wood that is the same thickness as the space behind the face frame. You can glue and screw the wood in place to make a secure attachment. After the wood is installed, measure up and make a mark where you want the slides installed. Simply screw the slides in where marked and install the sliding shelf by lifting the rear end of the shelf slides over the wheel on the front end of the cabinet slides.

Spacers

Spacers allow the slides to be mounted further in width-wise from the side of the cabinet or the cabinet's Face Frame. This allows shelves to move freely when they would otherwise hit hinges, doors, etc. Again, if you reduced your Clear Opening Width measurement to account for such things, you need spacers. The size of spacer you need is the difference between the total open width of your cabinet front face frame and your Clear Opening Width measurements. If the exact spacer size you need isn't offered, order one size larger. (See Page 14)

Door Protector

We include one door protector for each shelf up to 21" wide and two for larger shelves. The door protector is mounted to the side of the shelf. The protector sticks out about 1/16" past the drawer slide and keeps the shelf from potentially scratching the door. Screw the door protector to the side of the shelf with one screw. Be careful of the hinge clearance and if the door has a recessed panel, make sure you mount the protector as low as possible.

Custom Pull-out Shelves

***** Free Shipping on all Custom Pull-out Shelf orders over \$750 *****

Only available within the contiguous USA, only applies to Custom Pull-Out Shelves.

Please read our measuring and installation guides before ordering. Our Premium custom shelves have a lifetime warranty and include door protectors plus the hardware appropriate for your selected mounting style. Opening widths vary and are available in 1/16" increments. Shelf depths from 21 3/4" to 25 3/4" will come on 22" slides; shelves that exceed 27 3/4" require Blum Full-Extension slides.

Additional charges for extra widths, depths, and options may occur; please see our website for current pricing on all products. Spacers are not included.

Premium Shelf

AS23SS **\$79.95**

Our most popular and versatile shelf.

2 3/8" Tall

Widths: 6" to 39"

Depths: 9 3/4" to 25 3/4"

Kitchen Drawer Replacement

AKDR632 **\$99.95**

Perfect for cutlery, pots, and pans.

3 1/2" Tall

Widths: 6" to 35"

Depths: 9 3/4" to 25 3/4"

Medium Sliding Shelf

AM47SS **\$109.95**

Great for containing plastic ware.

4 7/8" Tall

Widths: 6" to 35"

Depths: 9 3/4" to 25 3/4"

Tall Boy

AT97SS **\$149.95**

Best for storing larger items.

9 7/8" Tall

Widths: 6" to 35"

Depths: 9 3/4" to 25 3/4"

Slanted Pullout

AS2373 **\$129.95**

Easy access, prevents from tipping.

2 3/8" Front - 7 3/8" Back

Widths: 6" to 32"

Depths: 9 3/4" to 25 3/4"

Bread Box Drawer

ABD73SS **\$149.95**

Keeps bread and pastries fresher.

7 3/8" Tall

Widths: 6" to 26"

Depths: 9 3/4" to 25 3/4"

Economy Sliding Shelf

AS58EWH **\$59.95**

Used for keyboards and turntables.

5/8" Thick Melamine

Widths: 6" to 26"

Depths: 10 1/4" to 26 1/4"

New Line

ASNL624 **\$69.95**

Unfinished, butt-joinery

2 5/8" Tall

Widths: 6" to 26"

Depths: 9 3/4" to 25 3/4"

Caddy Shelf

ASCP **\$54.95**

Designed to bypass pipes, it screws to the inside of our premium shelves.

Widths: 6" or 8"

Depths: 17 3/4", 19 3/4" or 21 3/4".

Pre-made Wire & Narrow Pull-outs

RV5WB1

Single tier chrome finished wire basket provides sturdy support for your cookware. Full extension slides are rated for 100 pounds and includes installation hardware. Shelves are 7" tall with bottom mounting. Listed width represents the cabinet opening, not actual shelf size.

9" wide X 18" deep	\$50.95	12" wide X 18" deep	\$55.90
12" wide X 22" deep	\$68.16	15" wide X 22" deep	\$76.16
18" wide X 22" deep	\$82.16	21" wide X 22" deep	\$90.16

RV5WB2

Two tier chrome finished wire baskets provide sturdy support for your heaviest cookware. Full extension ball bearing slides are rated for 100 pounds and includes installation hardware. Unit is 19" tall and requires a minimum 19 1/4" opening. Listed width represents the cabinet opening, not actual shelf size.

9" wide X 18" deep	\$114.95	12" wide X 18" deep	\$127.16
12" wide X 22" deep	\$141.16	15" wide X 22" deep	\$145.16
18" wide X 22" deep	\$157.16	21" wide X 22" deep	\$181.16

18" deep units require at least 18 1/8" of cabinet depth. The 22" deep units require a cabinet depth of at least 22 1/8". Mounts to cabinet base, face frame, and rear wall.

Make use of the dead space behind your existing filler panel!

Base fillers – Perforated stainless-steel panel comes with an assortment of pegs and hooks.

Drawer Organizers

DODT50-21WH

Insert is custom cut to fit inside your drawer and arranges your small to medium spice bottles. Your drawer must be a minimum of 4" tall. Specify inside drawer width and depth and we will cut the insert to fit your measurements.

Available from:

4" to 50" wide

4" to 9" wide

\$17.87

Add \$1 to every inch over 9" wide

6" to 21" deep

DORV4SD1

Birch and Maple hardwood spice insert has a UV-cured coat finish. Unit comes as stated size; you trim to fit your drawer. Insert is 1 1/2" tall.

16" wide X 19 3/4" deep **\$73.30**

22" wide X 19 3/4" deep **\$72.95**

DORV4WCT-1

Birch and Maple hardwood spice insert has a UV-cured coat finish, trim to fit with simple drop-in installation. Insert is 2 1/8" tall.

14 5/8" wide X 22" deep **\$49.95**

20 5/8" wide X 22" deep **\$64.95**

DORV4WUT-1

Organize kitchen drawers with ease. Trim-able wood tray is a simple drop-in installation. Unit is 2 7/8" tall.

18 1/2" wide X 22" deep **\$55.95**

24" wide X 22" deep **\$65.09**

DORV4KCB-18 **DISCONTINUED

Replace your drawer with this combination knife holder & cutting board. Uses your existing drawer front and includes full extension ball bearing slides with mounting hardware. 3 divided sections include 7 slot knife holder. Units are 4 3/4" tall.

14 1/2" wide X 22 3/4" deep

17 1/2" wide X 22 3/4" deep

20 1/2" wide X 22 3/4" deep

DORV4WKB-1 **\$89.95**

Maple UV-coated knife drawer provides up to 19 slots for knives and has a separate compartment for additional utensils. Simple drop-in installation saves valuable countertop space. Tray is 18 1/2" wide and can be trimmed as small as 3", depth is 22" and can be as small as 8". Unit is 2 7/8" tall.

Slides & Hardware

Top quality epoxy-coated slides from Julius Blum have a 100-pound static and 75-pound dynamic load rating. Synthetic rollers have a smooth roll and requires $\frac{1}{2}$ " clearance on each side. Set includes one left and one right rail, mounting hardware not included.

HB2322 Sold per complete set

9 $\frac{3}{4}$ " **\$15.49** 11 $\frac{3}{4}$ " - 21 $\frac{3}{4}$ " **\$10.49** 23 $\frac{3}{4}$ " **\$15.49** 25 $\frac{3}{4}$ " **\$19.49**

Slides that can move the shelf completely out of the cabinet. For smooth movement and a soft close, these slides use ball bearings rather than wheels. The mechanism is slightly more complicated than $\frac{3}{4}$ " extension. Unlike the other full extension slides, rear mounting works great for these slides.
