Stop Digging. Stop Kneeling.

Pull-out shelves bring everything in your cabinet out to you.

Before: reaching, bending and searching

After: slide it out and see everything

- **Easy on your back and knees.** No more getting down on the floor to find a pot in the back of the cabinet.
- **Use every inch.** Deep cabinets become fully usable storage instead of a black hole.
- **Built to fit.** Every shelf is made to your measurements in our Arizona shop, in 1/16" steps.
- **Built to last.** Baltic Birch Premium shelves carry a lifetime warranty.

Depths **17 3/4", 19 3/4" or 21 3/4"**

Starting prices shown. Ball bearing full extensions soft-close slides, extra widths and depths may add to the price.

Slides & Mounting Styles

Choose how your shelf slides, and how it attaches to your cabinet.

3/4 Extension Slides

Pull the shelf about 3/4 of the way out on smooth, reliable rollers. Items in the back come all the way out to the front. Our standard slide.

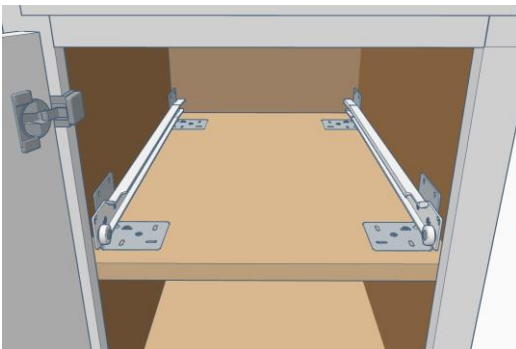

Ball Bearing Full-Extension Soft-Close

Ball bearing slides pull the shelf all the way out and close gently. Great for rear mounting. Shelf warranty is 5 years with these slides.

Four ways to mount

Most shelves use the base mount. If you have no shelf to set it on, use rear or side mount.

Base Mount

Easiest. Sits on the cabinet floor or an existing full shelf. Works with both slide types.

Half-Shelf Mount

For a shallow shelf (8" to 12" deep) in the back. Front of slides screws to the face frame.

Rear Socket Mount

No shelf needed. Sockets attach to the cabinet back wall. Must be specified when ordering.

Side Mount

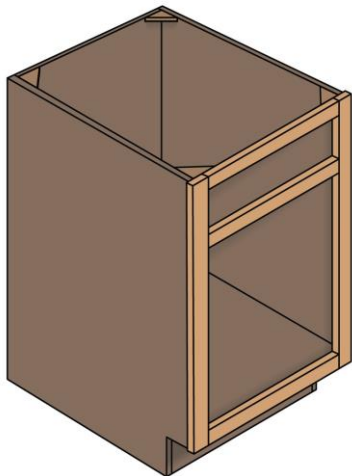

No shelf needed. Slides attach to wood strips or spacers on the side walls. Strongest option.

Frameless cabinet with one door? Base and Half-shelf mounts need about 1/4" for the L brackets. Subtract 1/4" from your width, **or** mount the wall (opposite side from hinge/door) slides directly to the side wall.

Measuring Guide

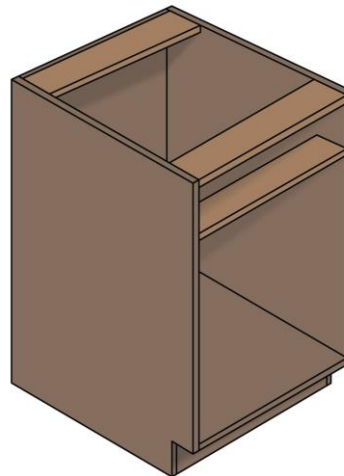

"Measure twice, cut once." Four easy steps to a perfect fit.

Step 1. Know your cabinet style

Face-Framed Cabinet

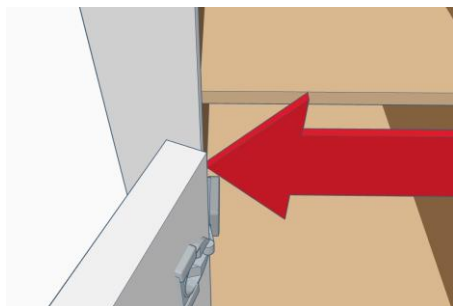

Has a wood frame ("stile") around the opening, like a picture frame. The opening is narrower than the inside of the cabinet.

Frameless (Euro) Cabinet

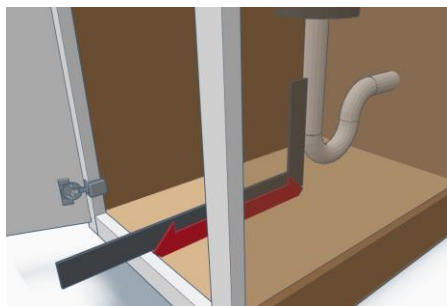

No frame. The side walls come right out to the front. Hinges are usually bulky and mounted on the inside wall.

Step 2. Look for obstacles

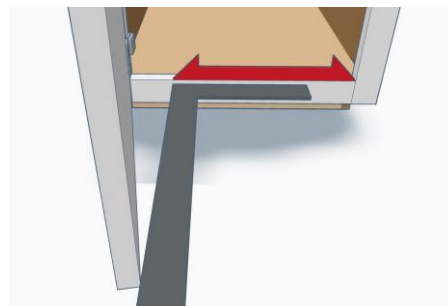

Door protrusion (common)

Hinges or a door edge that stick into the opening. Measure between them so the shelf does not hit.

Plumbing or wiring (common)

Hold a Carpenter's Square against the pipe or outlet box to find the width or depth that is really open.

Door won't open 90° (rare)

Knobs or nearby walls can stop the door. Put a Square against the open door and measure to the corner.

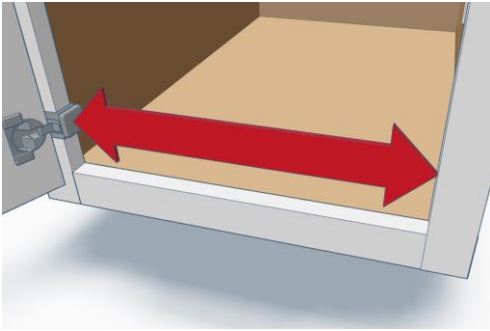

Measure at the height where the shelf will go. Always use the narrowest measurement you find at the height the sliding shelf will be at. It is normal for the upper to be slightly wider than the lower.

Watch our measuring videos

Scan with your phone's camera, or call 1-800-598-7390 or email us at sales@shelveshatslide.com. We are happy to help you measure.

Step 3. Measure the width (the "Clear Opening Width")

Face-framed, lower cabinet

Single door: from the hinge to the opposite frame.

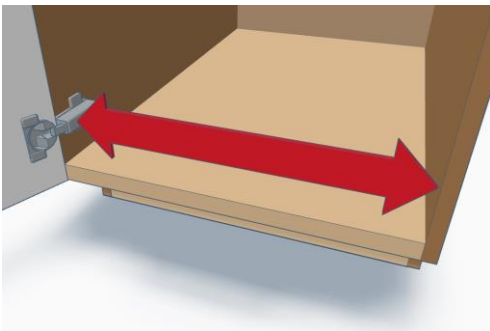

Double door: from hinge to hinge.

Face-framed, upper cabinet

Single door: frame to frame (door edge to frame if the door sticks in).

Double door: frame to frame (or door edge to door edge).

Frameless, lower cabinet

Single door: hinge to opposite wall. Base mount: subtract 1/4".

Double door: from hinge to hinge.

Frameless, upper cabinet

Single door: door edge to opposite wall. Base or half-shelf mount: subtract 1/4".

Double door: door edge to door edge.

The "Clear Opening Width" is the narrowest width your custom shelf will slide through. For a drawer opening, measure frame to frame (face-framed) or wall to wall (frameless; side mount works best).

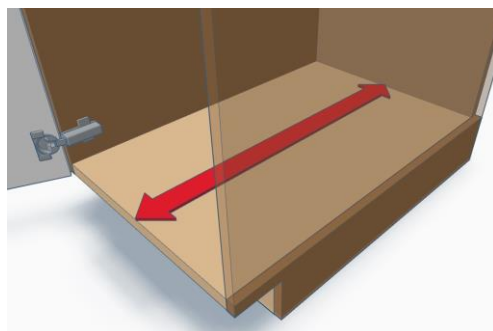

Step 4. Measure the depth

Face-framed:

back wall to the back edge of the face frame.

Shelf depths come in 2" steps from 11 3/4" to 31 3/4". Leave at least 1/4" to spare. Example: if your cabinet measures 23 1/2", order 21 3/4". A 23 3/4" shelf will not fit.

Frameless:

back wall to the front edge of the cabinet opening.

!! IMPORTANT !!

Never measure existing shelves or drawers. Your custom shelf will most likely turn out 1" too narrow.

Installation Guide

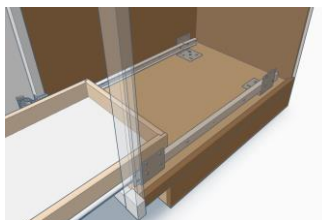

Most installs take about 30 minutes per shelf with a screwdriver or drill.

Before you start

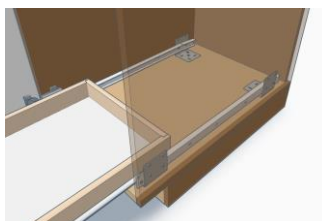

- **Which end is the front?** 3/4 extension (KV) slides: on the cabinet slide the wheels are at the FRONT; on the shelf slide the wheels are at the BACK.
- **Ball bearing soft-close slides:** on the cabinet slide the black plastic piece is at the FRONT; on the shelf slide the open end is at the BACK.
- **Your shelf box is 1" narrower than your opening.** That leaves room for the slides (1/2" per side). It is not a mistake!
- **Shelves need a solid base.** Replace plastic shelf clips with metal clips (page 14). To keep a loaded shelf from tipping when pulled out, put a couple of screws into the back or side wall just above the existing shelf, with the heads sticking out enough to hold it down. Alternatively; regular L-Brackets may also be used.

Base Mount

Shelf rides on the cabinet floor or an existing full shelf.

Face-framed

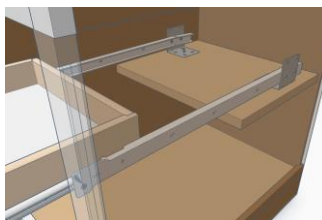

Frameless

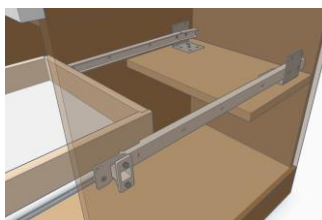

- 1 Set the cabinet slides (two L brackets each) on the floor or shelf, about as wide apart as your shelf, with the front ends forward.
- 2 Set the shelf onto the slides, right side first, and push it in. Square it up so the front sits about 1/2" to 3/4" behind the face frame.
- 3 Press down slightly and pull the shelf out just enough to see the rear brackets. Put one screw **loosely** in the right rear bracket's side-to-side slot. Check alignment, then do the left.
- 4 Carefully lift the shelf out without moving the front brackets. Screw the front brackets the same way. If using BB slides, slide forward all the way without removing.
- 5 Put the shelf back, slide back and forth until smooth, then tighten the original screws & add a screw in the center hole of each bracket to lock it in place.

Half-Shelf Mount

Rear of slide sits on a shallow back shelf; front screws to the face frame. You will need a small level.

Face-framed

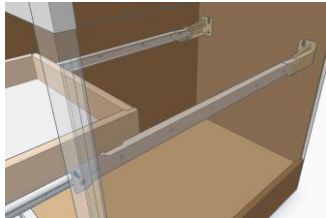

Frameless

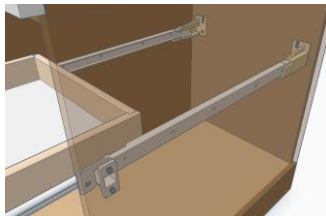

- 1 Make sure the half shelf is secure and on metal supports. The slide's L bracket goes on top of the half shelf.
- 2 Hold the front of the slide against the face frame (sidewall if frameless), about 3/16" back from the front edge. Level it and mark the front hole.
- 3 Measure the height of the first mark and mark the other side to match. Drill small pilot holes and screw the slide fronts in place. Use spacers if there is a gap between the slide and face frame (sidewall if frameless).
- 4 Line the shelf slides up with the cabinet slides and push the shelf in.
- 5 See BASE MOUNT – Step 3. Slide back and forth until smooth, then tighten the rear screws and add a screw in the center hole of each bracket to lock it in place.

Rear Socket Mount

Rear sockets used to attach to the rear wall and front sides. Shelves deeper than 22 3/4" need longer slides.

Face-framed

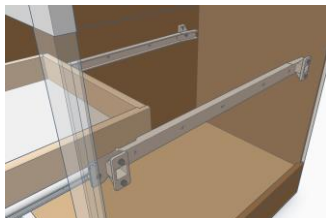

Frameless

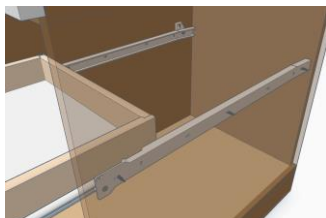

- 1 Hold the front of the slide against the face frame (sidewall if frameless), about 3/16" back from the front edge. Mark the front hole.
- 2 Measure the height of the first mark and mark the other side to match. Drill small pilot holes and screw the slide fronts in place. Use spacers if there is a gap between the slide and face frame (sidewall if frameless).
- 3 Slide the cabinet slides partway into the sockets (left and right are different with Standard slides). Screw the front of each slide to the frame or sidewalls at your marks. Extend the attached Rear Sockets back so they sit against the back wall.
- 4 Install the shelf, square it to the cabinet, and mark where each socket sits on the back wall.
- 5 Remove the shelf, level each slide to its mark, and screw the sockets in. Reinstall the shelf and check that the slides are parallel, then add a second screw to each socket.

Side Mount

The slides attach to the cabinet's side walls, built out so the shelf clears face frames, doors and hinges.

Face-framed

Frameless

- 1 Build out the side walls. Cabinet walls are usually thin (about 1/2"), and there's often 1" or more to fill behind the face frame, so spacers alone can make a weak install. For the strongest install, glue and screw two vertical wood strips to each side wall (one near the front, one near the back). Make them as thick as the space behind the face frame, running from the cabinet floor to above the shelf height.
- 2 Measure up from the cabinet floor and mark the slide height on all four strips. Make the left and right marks match.
- 3 Screw the cabinet slides to the strips at your marks, with the front end forward: the wheels on KV slides, the black plastic piece on ball bearing slides. Keep each slide level and parallel to the other.
- 4 Install the shelf. KV slides: lift the wheeled back end of the shelf slides over the wheels on the front of the cabinet slides. Ball bearing slides: line up the open back end of the shelf slides with the cabinet slides and push straight in.
- 5 Push the shelf in fully and check alignment, especially on the left side. If it binds or bumps, adjust the left slide until it rolls smoothly.

Spacers

Move the slides inward so the shelf clears hinges and frames. Size = full opening minus your clear opening. Not offered in your size? See: Frame Spacer

Door Protectors

Included free: one per shelf up to 21" wide, two for wider. Screw to the side of the shelf, low if your door has a recessed panel.

Ordering & Policies

Ordering

Order at ShelvesThatSlide.com, call 1-800-598-7390, or mail your order with payment.

Payment

Visa, MasterCard, American Express, money order or personal check. Orders paid by check ship after the check clears.

Shipping

Premium shelves ship in 2 to 3 weeks; NewLine and Economy in about 1 week; other products in 2 to 3 days. Free shipping on custom shelf orders of \$750+ to the contiguous USA (accessories, wire, trash and lazy susans do not count toward the \$750).

Returns

Call 1-800-598-7390 for a return authorization number. Items must be unused, unaltered and in the original packing. If we made a mistake building your shelf, we will fix or replace it at no cost to you. Recuts: see our website or call.

Cancellation

Cancel before your order goes into production at no charge. Orders canceled after production starts have a 25% cancellation fee.

Prices subject to change. Visit ShelvesThatSlide.com for the most up-to-date pricing.
